

Safe Touch

Innovative Smart Surfaces, for a Safer World

Every time someone touches a surface, they leave pathogens behind. Traditional cleaning can't keep up. High-touch surfaces in hospitals, care facilities, and public spaces are re-contaminated within minutes.

SafeTouch changes that.

Instant Pathogen Elimination

Embedded microheaters reach a high temperature in milliseconds — killing bacteria, viruses, and fungi on contact, automatically, after every touch.

Zero Chemicals. Zero Waste.

No disinfectants. No water. No harmful residues. iST technology is a genuinely clean solution for surfaces and for the environment.

Smart, Connected Hygiene

Wirelessly monitored and remotely managed, iST devices feed into the Smart Hygiene Grid turning passive surfaces into active infection control.

Beyond the device: the Smart Hygiene Grid

A network of iST-enabled surfaces — door handles, light switches, and more — managed in real time from a single mobile application. Continuous protection. Automated compliance. No gaps between cleaning cycles.
